DETAILED ACTION

Allowable Subject Matter

1. Claims 28-32, 35-37, 42-54 are allowed.
2. The following is an examiner's statement of reasons for allowance: claims 28-32, 35-37, 42-54 are considered allowable since when reading the claims in light of the specification, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims, specifically "*means for recording in digital format actual values of said plurality of sensors, actual values of said plurality of actuators and actual values of said drive system, wherein data of slow running processes are only recorded in individual time-spaced cycle pulses, so that only the data of fast running processes are contained in cycle pulses contained in between;*" and "*a time window assigned to each cycle pulse of said cycle pulses wherein, despite data transmission, comprises a residual time, which is able to be used for transmitting optional information.*" as disclosed in independent claim 28 of the instant application and "*means for eliminating errors in said means for data transmission and said means for transmission in said digital format includes means for effecting a shutdown of said packaging apparatus in the event of a fault, said means for effecting a shutdown including means for effecting a synchronous braking and, upon start-up of said packaging apparatus, effecting a synchronous acceleration of said drive system*" as disclosed in independent claim 43.
3. The Prior art of reference discloses that sensor networks having a control unit, a plurality of sensors, a plurality of actuators, and a drive system which operate in a microsecond range is well known (see 6,788,980 to Johnson and applicant's cited SERCOS document).
4. The prior art does not teach "*means for recording in digital format actual values of said plurality of sensors, actual values of said plurality of actuators and actual values of said drive system, wherein data of slow running processes are only recorded in individual time-spaced cycle pulses, so that only the*

data of fast running processes are contained in cycle pulses contained in between; “ and “a time window assigned to each cycle pulse of said cycle pulses wherein, despite data transmission, comprises a residual time, which is able to be used for transmitting optional information.” as disclosed in independent claim 28 of the instant application and “means for eliminating errors in said means for data transmission and said means for transmission in said digital format includes means for effecting a shutdown of said packaging apparatus in the event of a fault, said means for effecting a shutdown including means for effecting a synchronous braking and, upon start-up of said packaging apparatus, effecting a synchronous acceleration of said drive system” as disclosed in independent claim 43.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
